

Calaveras Prescribed Fire Training Exchange (TREX)

November 5 – 16, 2018

A multi-organizational burn team will be implementing prescribed fires in various locations across Calaveras County during the dates listed above. The projects will take place in and around the communities of West Point, Glencoe, Wilseyville, Arnold, and Dorrington. Professionals will be on site and fires will only be ignited under specific environmental conditions.

Prescribed burning is a resource management tool used by land managers to reduce the threat of wildfire to communities as well restore the health of California's fire adapted ecosystems. This project has involved extensive multi-organizational planning and has been properly permitted.

Residents may experience short-term smoke impacts. However, it has been well demonstrated that communities that experience short duration prescribed fire smoke can reduce the threat of wildfire smoke which can last many days and occur at far less healthy levels.

For further information about this project, please contact Phil Dye, Prescribed Fire Burn Boss, at (408) 807-1963 or phil@prometheusfireconsulting.com.
